

About Bradley Bengtson, MD

There are so many improvements in breast surgery, but most patients are still unaware of the dramatic changes that have been made that make the procedure easier and more comfortable for the patient. “3-D imaging technology now allows patients to navigate implant size selection and outcomes in ways never experienced before,” says Dr. Bradley Bengtson. “Our Vectra imaging lets patients ‘experience’ outcomes before their procedure. Standardized breast-implant and bra-cup sizing has helped to streamline results.” With more than 4,000 augmentations performed throughout his career, Dr. Bengtson says breast surgery is now easier than ever. “It’s completely bloodless, which creates less swelling, bruising and pain with average surgery times between 30 and 40 minutes. And with our Fast-Trak Recovery program, we expect our patients to feel good enough to go out to dinner or a movie the same day.”

“The best plastic surgery is in patients who you can’t tell have had it.”

State-of-the-Art Results

This 41-year-old patient desired fuller, natural-looking breasts and a flatter stomach. Dr. Bengtson performed a breast lift and tummy tuck to give her the beautifully contoured shape she'd always wanted.

How are you helping to advance your field?

By continuing to research and publish about breast revision techniques. I'm also launching a new tissue-closure device.

What are your most requested procedures?

Breast augmentations, breast revisions, breast reductions, tummy tucks, body sculpting, liposuction, facelifts and eyelid surgery.

What new services are you excited to offer?

We are excited to add CoolTone's muscle stimulating system and Profound RF Microneedling.
